Print, laminate and trim. Students can use these manipulatives to place however many leaves on the tree, that match that numbered tree. If you are running off a copy of the trees to be collated into a booklet for each child, then run off and give each student 55 leaves to cut and glue to their booklets. Children could also make fingerprint leaves, by pressing their finger tip onto a fall-colored stamp pad. A leaf punch or leaf stamp would also work nicely. You can also use these tiles for sorting & patterning.
