Number Group/Set Grid or Fan

Directions:

- Run off master.
- Cut papers in half.
- Children can simply use a variety of colored markers to put that many dots 0-10 under the number.
- Reinforce cutting and sequencing skills by having the students cut the numbered strips on the black lines.
- Have children sequence the numbers.
- Staple the bottom and use as a flip book or...
- Using a protractor, punch a hole in the bottom, insert a brad and the children can unfold the numbers like a fan.
- Have them refold the fan and “blast off” counting from 10 to 0.
- I have also given you a blank sheet for sequencing larger numbers of your choice as well as a sheet for sequencing numbers that are skip-counted to 100 by 5’s and 10’s.
- Children could use the blank strips to write the letters of their name on. Include their photograph on the first strip. This would help them learn to identify the letters in their name as well as how to spell it.
- You could also run the master off using colored strips for primary color recognition.
- Enjoy 😊
