Spot and count each dot!  
Can you spot 100 dots?  
Celebrating 100 Day is "snow" special!

## **Reinforcement Hole Snowman**

©TeachWithMe.com

“Reinforcing” counting and fine motor skills!

### **Materials:**

- Reinforcement holes.
- Each student will need 38. (45 come on one sheet.)
- Royal blue construction paper.
- Hole punch
- Scraps of colored construction paper for hole-punched dots
- Micro sticker dots
- White paint
- New pencils with hard erasers on the end.
- Small paper plates to put a dollop of paint on.
- Toothpicks
- Silver or white marker to write names on the bottom.

### **Directions:**

1. Run off the 5x7 circle template on blue construction paper, or if you want your picture's background bigger like mine, make circle templates from a file folder and students can trace larger banner-size backgrounds, or a room helper can have these traced for younger students. Make sure to remind students if they are tracing that they need to leave a gap in between the circles.
2. Students or a room helper can punch the mini dots or you can use micro sticker dots for this part.
3. If you opt to use the hole punched dots, put a dollop of glue on a paper plate. Using a toothpick, students put tiny dots of glue on their picture.

- Using a different toothpick, they put the smallest dot of glue on the tip to pick up their mini dots on the edge of the circle and then press them on the little glue specks.
4. You can keep things simple for younger students and have them just follow the circle outlines and make only a reinforcement hole snowman. They can then add details with colored chalk.
  5. You can also stop with the micro dots as shown in the photo, or turn this into a 100-Day activity and have students dip the end of their pencil into a tiny amount of white paint and then press the eraser on the blue background to make 26 snowflakes. If you've followed the amount of dots and reinforcement holes used on my picture they will equal 74.  $74 + 26$  snowflakes will give students 100 dots to spot!
  6. These look nice hung on an aluminum foil background on your bulletin board, or punch a hole in either corner, add a yarn tie and hang back-to-back from the ceiling or in a row along the top wall in your hallway.
  7. Brrr-illiant!
