## Learning to Count By 5's

A Quick and Easy Bulletin Board for Back To School and Counting to 100 Day!

I only have to skip count by 10's to 100 with my Y5's as a report card standard, but I know this is a standard for K's and first grade. A fun way to do this everyday as well as to count up to 100 for that special day, is to make this quick and easy bulletin board.

Here's how:

- Choose a background color that you will be happy with all year long, yellow and white look nice, but I've also used wallpaper that's neutral in color and has a textured look and feel.
- This is not that expensive if you only buy one roll and you can usually find discounted rolls that have been discontinued at most paint and hardware stores.
- This display works great next to your calendar center.
- You can put it up on the wall if you don't have another bulletin board.
- Choose a plain-colored scalloped border.
- Black will help it pop and looks great all year.
- The caption for this board could be: ***High Five's For \_\_\_\_\_'s kindergartners/first graders!***
- Cut the letters out with a die-cut machine, or print them out on your computer.
- On the first day of school have a room helper trace and cut out your students' hands, or send a note home and the paper in your Open House packets to have this already done for you by the parents.
- Make a sample of your own hand and explain to children that they can decorate their hand with fingernails, and rings.
- If you want to give the hands a bit more pizzazz and a 3-D affect you can give them rhinestones for their rings.
- Boys may enjoy wiggle eyes, but don't be surprised if they want a rhinestone too.
- You could make the rhinestone their birthstone, or simply give them a choice of colors.
- Use glue dots so there's no dry time involved.
- For the girls' nails they can color them as if they have nail polish on.
- If you want to add more pizzazz you can go over them with real glitter nail polish or glitter glue.

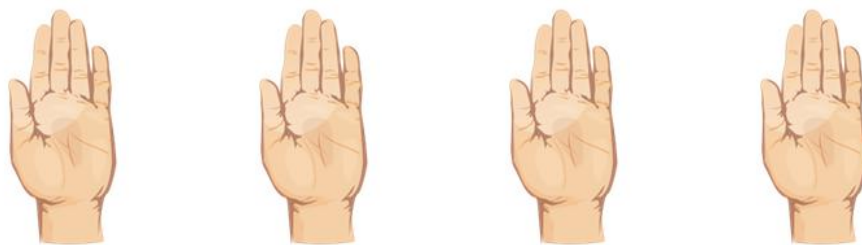

- If you want to use the board to show a specific pattern, use the construction paper that they are tracing their hand on in two or 3 different colors.
- Left handed children should have their left hand traced for more opportunities to compare and contrast, count, or graph this board.
- Write the child's name in small print along the bottom border of the hand.
- Print off a copy of the two posters and mount them on construction paper.
- These can be your school colors or something that you can live with for the entire year, or have the class vote on what colors they want.
- If you have 20 children in your class you have the perfect set of hands.
- If you have less, you will have to make extra hands,; if you have more, sprinkle them on the corners of the posters, heading and bulletin board.
- Put the rest of the hands, 5 in a row, across your bulletin board.
- Do NOT number them.
- On the FIRST day of school, when you are doing the calendar, choose a child to put the number 1 on the thumb of the first hand.
- When all 5 fingers of that hand have been counted (5 days of school) the child whose handprint that is, gets to choose a marker and write the big number 5 on that hand.
- Even tho' the numbers are not written on the hand, you can still count by 5's everyday that you are doing this calendar.
- You may want to post an already numbered poster to help them "see" and visualize this.
- I've made posters you can print off.
- You can also count by 1's.
- If you want to make V-arrows connecting 2 of the hands when you get a group of 10 done, you can also use the board to count by 10's!
- At the end of the year, everyone can take their hand print home.
- Click on the link to view/print the masters for this article. **Skip Counting Bulletin Board**

I hope you enjoyed this idea.

Do you have a fun way to help your kiddo's learn to count by 5's?

How do you keep track of counting to 100?

I'd enjoy hearing from you! [Diane@TeachWithMe.com](mailto:Diane@TeachWithMe.com)

Day!

Dear Family's

We are learning to skip count by 5's.

Would you please help your child with this memory task by simply taking one minute out of your day to count by 5's one time with them? I've included a poster for you to hang up to help you with this task.

Your cooperation is appreciated.

If you have any questions feel free to give me a call.

Educationally Yours,
